NATIONAL COPYRIGHT GUIDELINES

A guide to copyright issues affecting schools and TAFE

- What can i copy/communicate?
- Education Licences (Statutory and Voluntary Licences)
- How to clear rights (where there is no Statutory Licence or Voluntary Agreement in place)
- Hot Topics

More... ➔

FAQS

The most commonly asked questions about copyright in schools and TAFE

- Artistic Works and Photographs
- CD-ROM
- Commercial Activities in TAFE
- Computer Programs

More... ➔

INFORMATION SHEETS

A series of information sheets providing useful facts and scenarios on copyright for schools and TAFE

- Schools
- TAFE

More... ➔

OPEN EDUCATION

Smart ways of managing copyright costs and dealing with copyright material

- Open Education Resources

EDUCATIONAL RESOURCES

Survey training material and other educational resources on copyright

- NCU PowerPoint Presentations

LAW REFORM

New material and information on copyright

- Fair Use

Education no longer means this...

Education now means this...

MakerBot Thingiverse

Google Classroom

Copyright laws are outdated & inconsistent

- Outdated laws are holding back innovation in schools: laws designed in the age of the photocopier are not working in the age of the iPad, 3D printer, and data/text mining.
- There are inconsistent rules for educational use around the world: most countries have minimum copyright protection and enforcement provisions in their domestic copyright law (required by multilateral treaties such TRIPS, GATT, WCT), but there are no minimum standards for educational use or other non harmful public interest uses.

The race to STEM

- 75 of the fastest growing occupations require STEM skillset
- Worldwide drive to provide specialist STEM education alongside the standard school curriculum
- OECD reports that STEM deficits in Australia as well as EU are one of the greatest concerns for the business community and government
- Schools are increasingly focusing on real life scenarios that combine skill-based challenges, innovative hands-on practical work, and motivational game-like activities

New learning, technologies and outside experts

- Improve critical and creative thinking, problem solving and communication skills
- Use new equipment, explore new concepts and learn new techniques
- New assessment and data analytics help teachers to quickly evaluate the impact of teaching and learning strategies
- Allows teachers to constantly create new resources for student engagement and learning
- Many schools invite specialists and businesses to work with students

Countries with flexible educational use exception

- United States
- Israel
- Canada
- Korea
- Singapore

Many countries reviewing their copyright laws

- Australia - ALRC & Productivity Commission recommends Fair Use; Copyright Amendment Act; TPM Regulations
- South Africa – debating the 2017 Copyright Amendment Bill
- Singapore – reviewing its fair dealing provision
- EU – wide review
- NZ - Copyright Law review announced

Way forward in Australia

- Fair use would:
 - enable educational uses - irrespective of the technology used - when these uses are fair to copyright owners;
 - allow teachers to make full use of the most up to date digital technologies in the classroom;
 - be considerably easier than the current exceptions framework for teachers and the ordinary citizen to understand and work out the limits of exceptions available to them;
 - promote innovation, match consumer expectations, be more flexible and protect the market for artists and creators.
- The world's largest exporter of cultural goods, **the USA**, has a **fair use system**, as do **Singapore, Israel and South Korea**.

Copyright reform is key to innovation and education

OER policies

- **do not replace the need for copyright reform.**
- **are a core part of the puzzle in encouraging public access to publicly funded resources in a digital age.**

Shared principles and goals of OER & copyright law reform

- Increasing and strengthening the public domain
- Facilitating access to information and knowledge
- Easier, more flexible access for content users
- Fairness to content creators
- ‘Some rights reserved’ rather than ‘all rights reserved’
- Meeting the needs of the digital environment/economy

Teachers love to share and collaborate - teachers need to support copyright law reform efforts as well as grow and advocate for OER

Today's educators and students need copyright law to be...

- Internet compatible: © laws that are better adapted to the Internet and the freedom which the Internet provides to copy, distribute, adapt and remix resources.
- Technology Enabler: © laws need to ensure teachers and students can use new technology - 3D printing, AI, text and data mining, coding, new online education platforms (eg Google Classroom, Edmodo).
- Sharing Enabler: © law prevents content from being shared and copied without permission of the owner. Need © exceptions to allow sharing between teachers, students and the community.

Today's educators and students need copyright law to be

- Accessible: © laws need to allow teachers to provide content in accessible formats for print disabled, hearing impaired and students with learning difficulties.
- Collaborative: need © exceptions that encourage collaboration between teachers, students and the community.
- Equitable- © exceptions help provide equal access to knowledge for everyone, allowing educational resources to be adapted in other languages or for those with disabilities.
