## 2<sup>nd</sup> European Conference on ICT for Transport Logistics (ECITL)

We are pleased and proud to announce the *2nd European Conference on ICT for Transport Logistics (ECITL '09)*. It is a follow up to last year's successful event, "[ICT in Transport Logistics](#)", which took place in the beginning of November at Lucerne.

The international event is organized as an independent conference by several EU funded projects dealing with communication technologies and how they can be integrated to provide value-added services in transport logistics. The conference topics are focused on addressing current and future issues and challenges for stakeholders in this sector and currently and future available solutions regarding increased efficiency and sustainability in logistics. The target audience includes all stakeholders in the area of transport logistics, e.g. logistics operators, industry, infrastructure providers and authorities, but also researchers and experts.

Therefore, we will be pleased to have participants from all involved sectors in transport logistics again and even more, as we have extended the conference programme and the number of supporting projects. After looking for a venue fulfilling all our needs for the conference we have found a suitable location in Venice, a city with history in the transportation sector for more than a millennium.

"A conference always benefits from the speakers and the audience. I think we have addressed interesting topics regarding ICT for optimized and energy efficient logistics. The ECITL offers a unique platform for the logistics industry and research community to network and exchange knowledge, in their ambition towards sustainable logistics concepts for the 21st century."

-- Jens Schumacher, Organizer, University of Applied Sciences, Austria
