

# Sequence learning with hidden units in spiking neural networks

Johanni Brea, Walter Senn and Jean-Pascal Pfister

# Task: Learning a distribution of sequences

# Model

stochastic spike response model

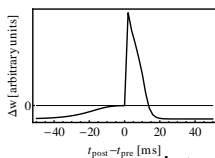

model distribution:  $P_w(v)$

stochastic gradient descent on  $KL(P^*(v) || P_w(v))$

$$\Delta w \propto \text{global factor} \times \text{pre} \times \text{post}$$

consistent with STDP

EM with importance sampling

# Results

overlay of 20 recalls

target

simple Hebb

only visible

only readout

our rule
