- consulting
Introducing:
The Workflow World of TermWeb
"The abominable terminology web"
Integrates with content and translation management systems...

...and many more
Challenges

No standard for

- integration with different tools (different APIs, different technologies)
- term identification in web and other content (php, asp, html, java, .net, MS Word files...)
- term tagging (i.e. do not translate terms; brand names)
- contextual and other term related information.
- term matching in translation memories and different CAT tools.
