

# Identifying Dendritic Processing

Aurel A. Lazar and Yevgeniy B. Slutskiy

T5

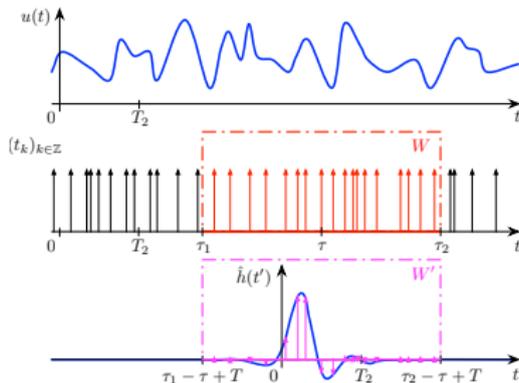

## Problem Setting

## Kernel and Its Projection

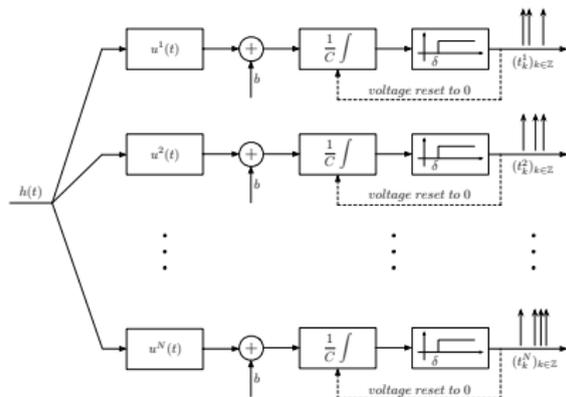

## [Filter]-[Ideal IAF] Neural Circuit

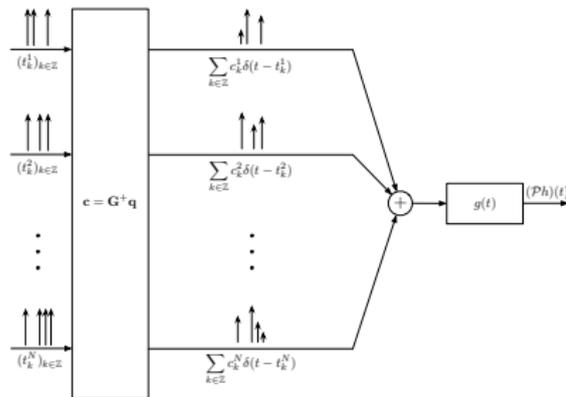

## Kernel Recovery

# SIMO TEM Interpretation of the Identification Problem & the Neuron Identification Machine

T5

SIMO TEM Interpretation

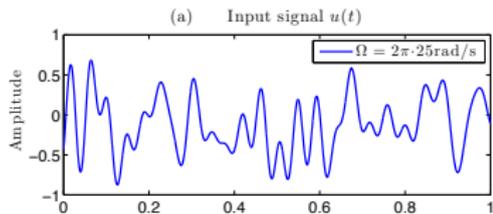

Neuron Identification Machine

$$(\mathcal{P}h)(t) = \sum_{j=1}^N \sum_{k \in \mathbb{Z}} c_k^j \psi_k^j(t).$$

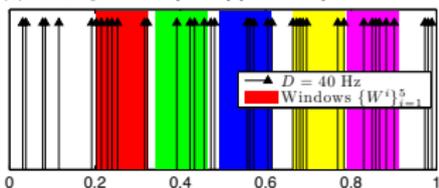

# Identifying the [Filter]-[Ideal IAF] Neural Circuit

Input Stimulus Bandwidth  $\Omega = 2\pi \cdot 25$  rad/s

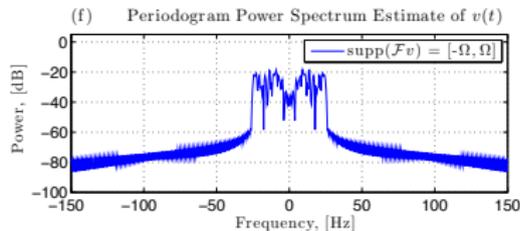

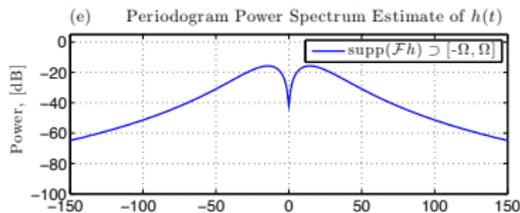

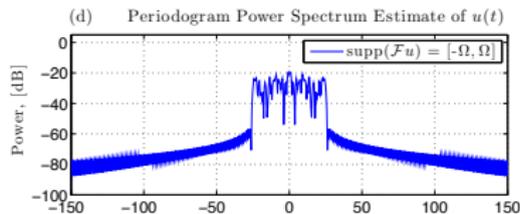

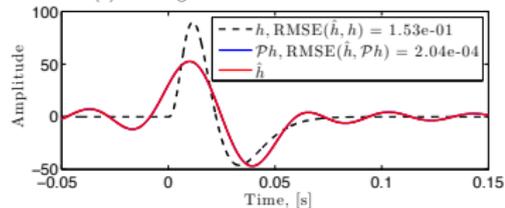

T5

(b) Output of the [Filter]-[Ideal IAF] neural circuit

(c) Original filter vs. the identified filter

# The Filter Identification Error

Versus the Number of Temporal Windows and Input Signal Bandwidth

T5
