

Variational Inference over Combinatorial Spaces

Alexandre Bouchard-Côté

Michael I. Jordan

Hard inference problems

$$Z_{\theta} = \sum_x \underbrace{\exp \langle T(x), \theta \rangle}_{f_{\theta}(x)} \mathbf{1}[x \in \mathcal{S}]$$

Large treewidth

Combinatorial space \mathcal{S}

Inferential Situation

Approximation

Large Treewidth

Combinatorial Space

MCMC

Gibbs

Metropolis-Hastings

Variational

Message passing,
Structured mean field

Measure factorization

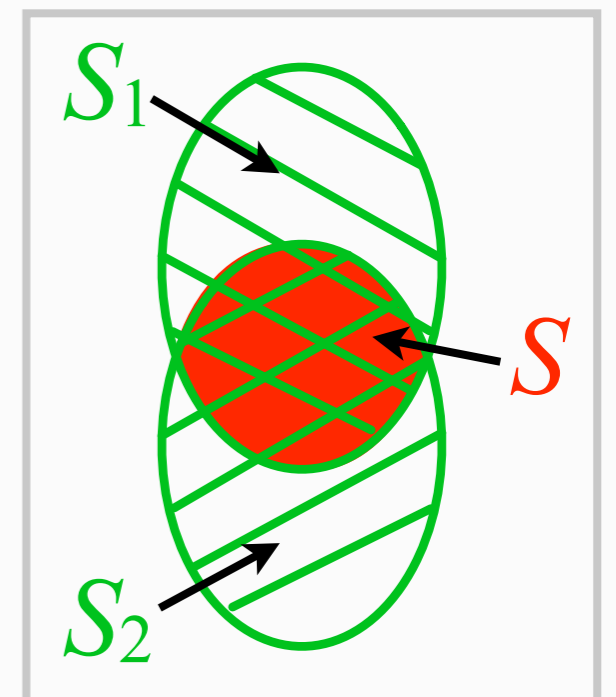

Goal:

$$Z = \sum_{x \in S} f(x) \quad (\text{intractable})$$

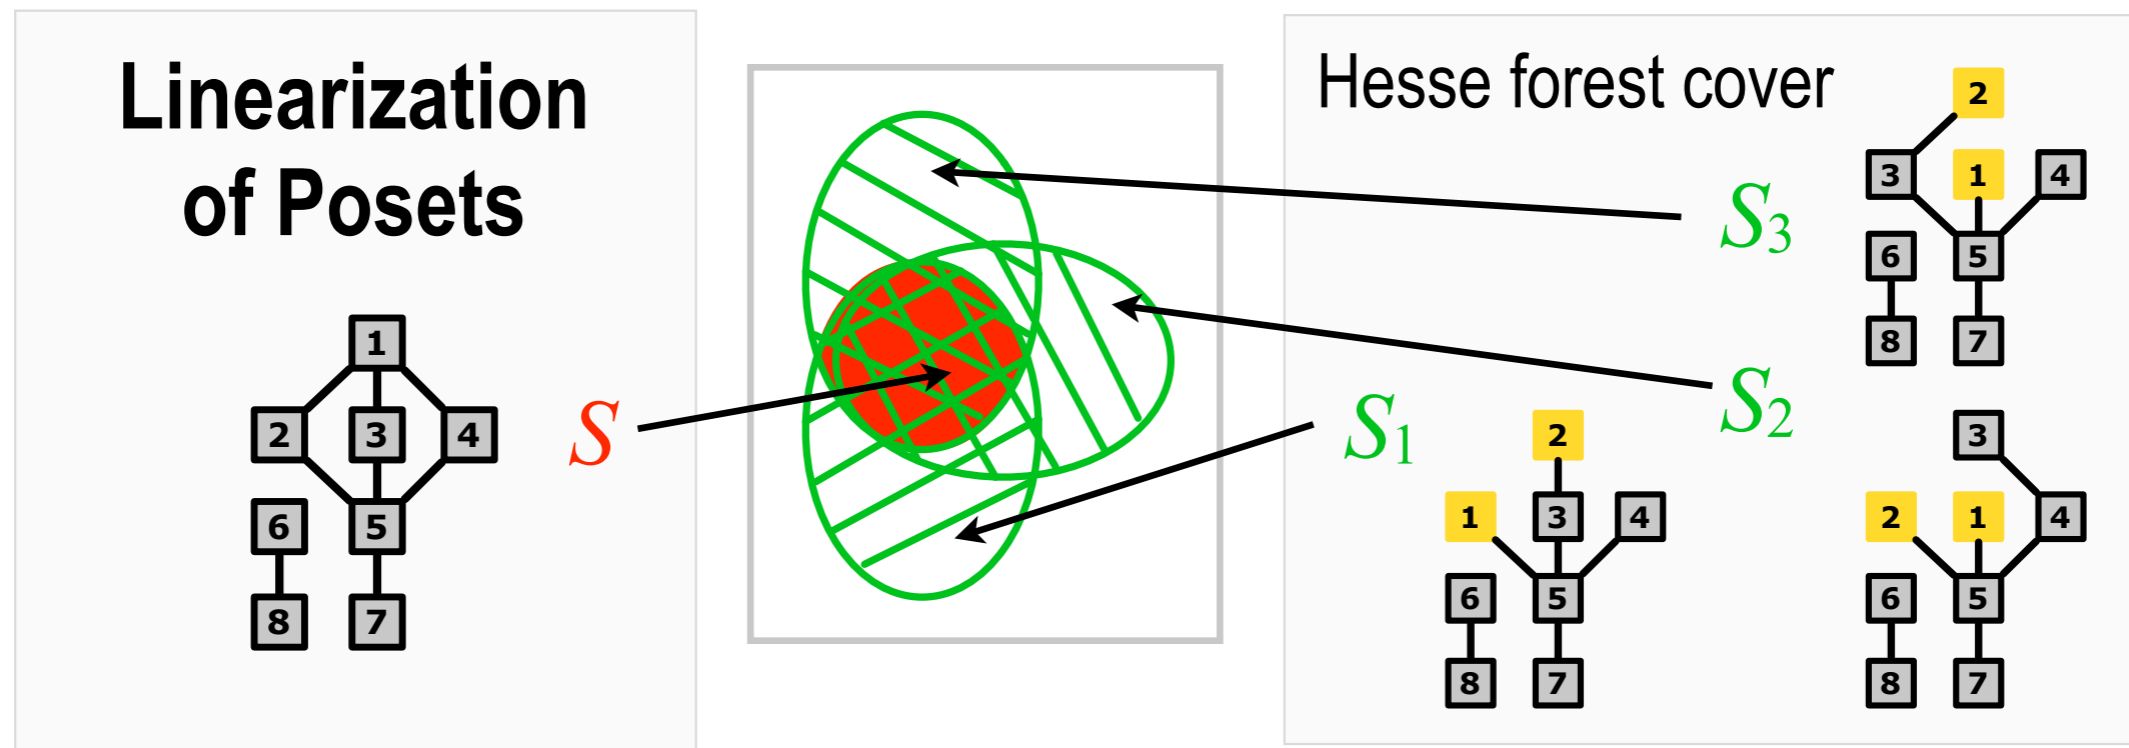

Assumption:

$$S = \bigcap S_i \quad \text{such that:}$$

$$Z_i = \sum_{x \in S_i} f(x) \quad \text{is tractable}$$

Examples of measure factorization

Application: Multiple Sequence Alignment

Types of constraints

Monotonicity

Transitivity

Poset structure

Generalized setup

$$S \subset \bigcap S_i$$
