Project goal

- To build a **dynamic knowledge graph** of company data across Europe
- The aim is to cover many aspects of company data, organize them into a knowledge graph and make it available for a number of services

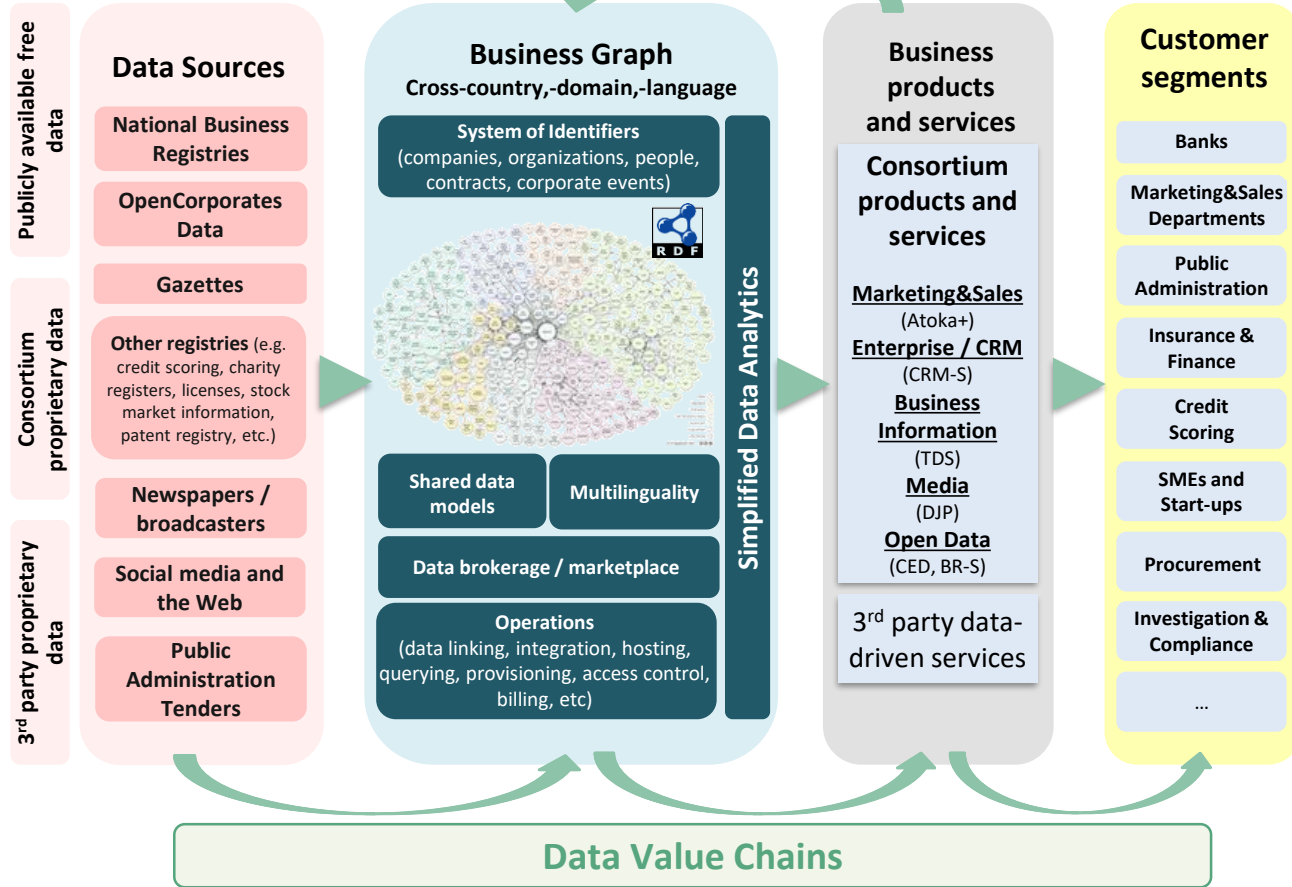

Main Challenges

- **Developing shared identifiers** for companies (incl. mapping to existing identifier systems)
- Heterogeneity (many different sources, across-sectors)
- Fragmented across borders
- Unclear authoritativeness
- Data compatibility
- Expensive, time-consuming and error-prone reconciliation

Why company data

- Core asset in digitalization of business and society
- Serves as a foundation of many data value chains
- High societal significance (transparency, accountability)

Data Value Feedback Chain

Thank you!
