

Roadmap for European Technologies
in Hardware and Networking for Big Data

RETHINK big Project

Adrián Cristal

Barcelona Supercomputing Center

20th, March 2014

www.rethinkbig-project.eu

Mission

Mission

🌀 To identify and evaluate the existing competencies across **European Big Data Hardware and Networking** technology sectors and application domains

Mission

- 🕒 To identify and evaluate the existing competencies across **European Big Data Hardware and Networking** technology sectors and application domains
- 🕒 To prioritize the complementary interests and the shared opportunities to unlock the highest return on their respective investments

Mission

- 🕒 To identify and evaluate the existing competencies across **European Big Data Hardware and Networking** technology sectors and application domains
- 🕒 To prioritize the complementary interests and the shared opportunities to unlock the highest return on their respective investments
- 🕒 Resulting in a roadmap that would be irrational not to follow.

Why Hardware matters?

Why Hardware matters?

☞ All Software runs on hardware....

☞ MapReduce

☞ CUDA

☞ OpenCL

☞ MPI

☞ OpenMP

☞ ...

Why Hardware matters?

🗣️ All Software runs on hardware....

- 🗣️ MapReduce

- 🗣️ CUDA

- 🗣️ OpenCL

- 🗣️ MPI

- 🗣️ OpenMP

- 🗣️ ...

🗣️ You might not want to admit it but...

- 🗣️ You are constrained by hardware and the network

🌀 In the next 10 years, the HW will change more dramatically than it has in the past 10 years

🌀 HW will influence the products and services that you provide

The world in 3D (3D Stacking)

- 🕒 **Very large bandwidth**
- 🕒 **Very low latency**
- 🕒 **Large amounts of memory on a chip**
- 🕒 **Locality will be extremely important**
- 🕒 **Thermal problems**

Figure from EPFL
<http://esl.epfl.ch/page-58161-en.html>

Non-volatile memory

- 👤 **New technologies (STT-RAM, CB-RAM, RRAM, ...)**
- 👤 **More density**
- 👤 **Replacement for DRAMs**
 - 👤 Endurance problem
- 👤 **Large influence on software**
 - 👤 Data base systems
 - 👤 File systems

Dark Silicon Era

🕒 Thermal problems

🕒 Not all cores will be able to be on all the time

🕒 Extensive use of Accelerators

🕒 Reconfigurable computing

What happens if HW does not consider SW

🕒 **Many changes in HW architecture do not survive**

🕒 Cell processor (Playstation 3 processor)

🕒 Itanium processor

What happens if SW does not consider HW

🕒 Terasort contest: sorting 100TB data

🕒 Number 1: Hadoop

- 🕒 2100 nodes, 12 cores per node, 64 Gb per node
 - 🕒 24.000 cores
 - 🕒 134 Tb memory
- 🕒 Time: 4300 secs

🕒 Number 2: Tritonsort

- 🕒 52 nodes, 8 cores per node, 24 Gb
 - 🕒 416 cores
 - 🕒 1,2 Tb memory
- 🕒 Time: 8300 secs and 6400 secs

- 🕒 Hadoop is easy to program, but needs 57X more cores, 100X more memory, and only gets 2X performance

New Technologies

🌀 Neural Networks

- 🌀 Analog Memristor-based

🌀 Graphene transistors

🌀 Quantum Computing

🌀 DNA computing

🌀 ...

Challenges

Challenges

Work with different areas

-  Applications and end users
-  Software Tools
-  Systems
-  Network
-  Hardware

Challenges

🔄 Work with different areas

- 🔄 Applications and end users
- 🔄 Software Tools
- 🔄 Systems
- 🔄 Network
- 🔄 Hardware

🔄 Work with different requirements

- 🔄 Speed
- 🔄 Volume
- 🔄 Real Time
- 🔄 Sensors
- 🔄 Variability
- 🔄 Power consumption
